To Whom It May Concern:

Decagon Devices, Inc. is the sole manufacturer of the WP4C Dewpoint Potentiometer. Decagon Devices sells direct to researchers in the United States and does not have any distributors or resellers in the US. In the event an instrument is purchased through an unauthorized distributor or reseller, all warranties are void.

The WP4C Dewpoint Potentiometer is the only instrument that uses the chilled mirror dew point method to determine water potential automatically. This makes the WP4C the most accurate and fastest water potential instrument available, with the greatest measurement range. Other instruments measure relative humidity with sensors that detect changes in electrical resistance or capacitance; still others, like pressure plates and hanging water columns use out-dated manual pressure measurements, and are not accurate in the range of the WP4C. The WP4C is also the only instrument to interface with Hyprop Fit, a complete measurement system to generate the entire soil moisture retention curve.

Sincerely,

Christopher Chambers
