

**METER**

## **4G LTE ZL6 AVAILABILITY**

METER Group is committed to connecting your environmental monitoring sensors to ZENTRA Cloud. Due to a global part shortage, METER is prioritizing 4G LTE-enabled ZL6 loggers for our clients in locations experiencing loss of both 2G and 3G cellular connectivity.

METER offers a 4G modem replacement kit for ZL6 and EM60G data loggers that are no longer able to use 2G or 3G cellular networks. This kit includes a new SIM card when required. Please contact METER to determine the upgrade path that will work best for the carrier coverage at your installation site.

METER is monitoring the 2G/3G network shutdown. When possible, METER will reach out to clients who will be affected by these networks going offline.

As the parts shortage eases, METER will be able to offer 4G ZL6 loggers and modem upgrades to all clients.

If you have any questions regarding the 3G and 4G cellular network connections please reach out to the closest METER office.
